

# Knowledge Exchange: Human-wildlife conflict databases

Wednesday, July 31, 2024

SUPPORTED BY

LED BY

WORLD BANK GROUP

IN PARTNERSHIP WITH

TRAFFIC  
the wildlife trade monitoring network

# Objectives

---

- to **share successful examples** from countries that have created a state or national level database.
- to **discuss challenges** across GWP countries around setting up a database and **what the GWP can do to support.**

## UGANDA HWC DATABASE

**Presented by Sharon Kamuganga Kagwisa, Ag. Manager**  
*Human-Wildlife Conflict, Uganda Wildlife Authority*

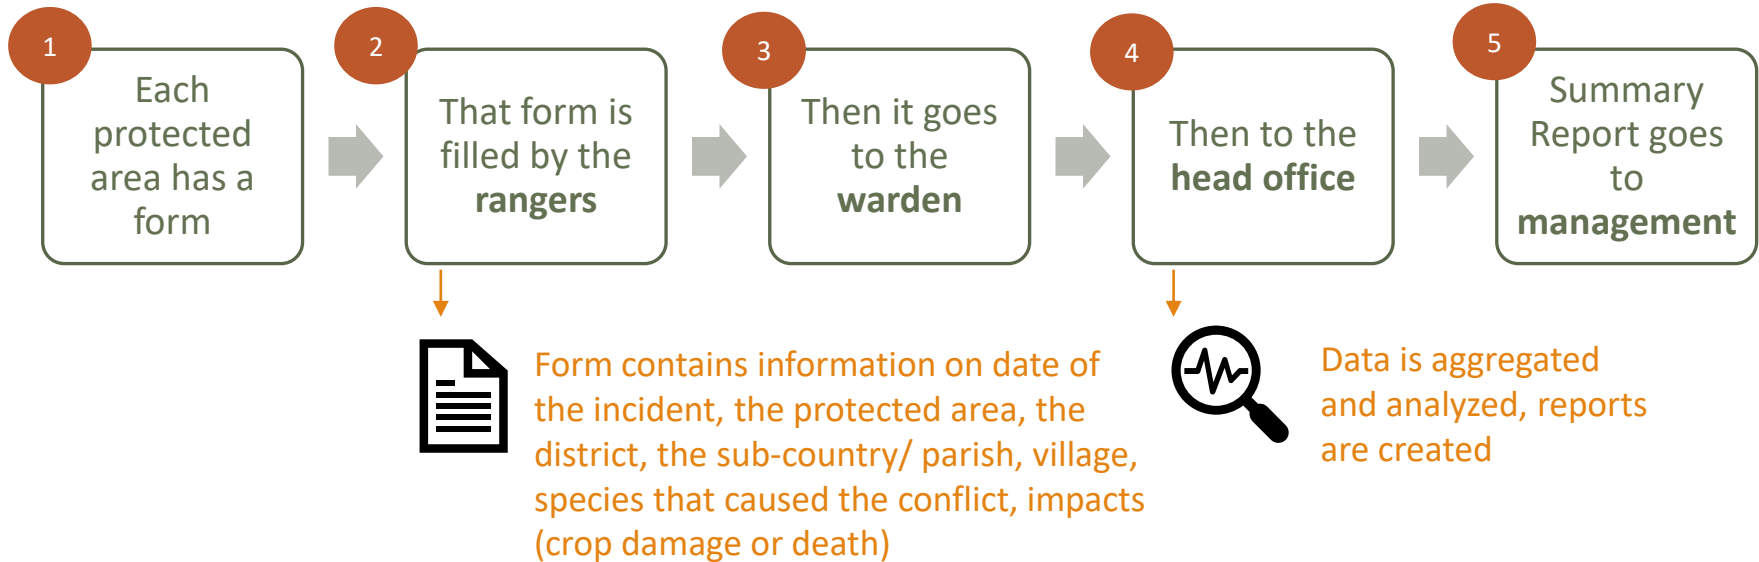

# Why does Uganda have a national level HWC database?

A database allows for systematic collection and organization of data related to incidents of human-wildlife conflict. This can include information on the types of conflicts, locations, species involved, and frequency of incidents.

1. **Analysis and Trends:** A database enables analysis of patterns and trends over time. By identifying hotspots and trends, authorities can implement targeted and effective mitigation strategies.
2. **Resource Allocation:** With detailed data, resources can be allocated more efficiently. For example, if a certain area is identified as a conflict hotspot, more resources can be directed to that area for prevention and mitigation. Authorities can have a basis for requesting for funding if they have proper data showing the extent of the problem.
3. **Monitoring and Evaluation:** A database helps in monitoring the effectiveness of implemented strategies and policies over time. It provides a basis for evaluating the success of different approaches and making necessary adjustments.

# How does the database work?

# HWC Database – Outputs

# Recommendations

When setting up a database for managing human-wildlife conflict (HWC), there are several important considerations to take into account:

- 1) **Establish a clear HWC Policy or strategy:** A formal policy or strategy is crucial as it provides the legal and institutional framework for data collection and management. This ensures that relevant stakeholders are mandated to collect and share data. Example: Uganda's HWC strategy mandates that wardens collect specific data, ensuring consistent data flow into the database.
- 2) **Standardize Data Collection Methods:** Ensure that data collection methods are standardized across regions and stakeholders. This allows for consistent, comparable data.
- 3) **Use Technology for Data Collection:** Leverage modern technology such as mobile apps and GPS for real-time data collection and geotagging of incidents.
- 4) **Training and Capacity Building:** Train field staff and stakeholders on data collection and database management to ensure accurate and efficient data entry.

**Questions?**

## **NAMIBIA HWC DATABASE**

**Richard Fryer,**

Ministry of Environment, Forestry and Tourism  
Control Warden – Human Wildlife Conflict and  
Conservation Hunting, Namibia

**Innocent Haingura**

Senior Technical Advisor – Community Conservation  
Governance and Livelihood Diversification, GIZ, Namibia
